TOSVERT VF-S15

Trace Tool PCT002Z-E

Instruction Manual

Notes
1. Be sure to read this manual carefully before connecting and using the trace tool for the VF-S15.
   After reading the manual, be sure to store it.
2. The contents of this manual are subject to change without prior notice.

1. Introduction
The trace tool “PCT002Z-E” for VF-S15 is software that performs the following functions when used with an inverter connected to a computer via an RS-485 communications device. Read this manual carefully along with the instruction manual for VF-S15 before using PCT002Z-E and use it correctly.

- Exporting and Importing trace function-related parameters
- Reading information on the inverter
- Reading trace data
- Displaying read trace data in graphic form
- Storing trace data

*1 PCT002Z-E does not support any inverters other than VF-S15.
*2 To use PCT002Z-E, the USB converters unit shown in Fig. 1 below are required.
*3 PCT002Z-E use the TOSHIBA inverter protocol. Therefore, please set the TOSHIBA protocol (F829 = 0) to the protocol selection of drive.

- USB converters unit (part  in this figure)
- Inverter interconnect cable (part  in this figure)
- Computer interconnect cable (part  in this figure)

![Fig. 1 An example of connection of USB converters unit](image)

<td>4.8m</td>
</tr>
</tbody>
</table>

- USB cable (A-B connection type)
  Prepare a commercially available USB cable (USB1.1/2.0-compliant).
  Recommended cable length: 1m
*4 System requirements
   Personal computer with Microsoft® Excel® installed
   Others: A USB port is required for the computer to connect to the inverter.
   It is recommendable to use a mouse or a similar pointing device for operation.

*5 PCT002Z-E may not run normally on some types of PC-98 series computers.

*6 It has been confirmed that PCT002Z-E runs normally on the software listed in the table below.

<table>
<thead>
<tr>
<th></th>
<th>Microsoft Excel</th>
<th>MS-Excel 2010</th>
</tr>
</thead>

<td>O</td>
</tr>
</tbody>
</table>

*7 Connect the optional USB communication converter before starting PCT002Z-E. Do not plug or unplug the connector when PCT002Z-E is running.

*8 How to install PCT002Z-E
   To install PCT002Z-E, just extract the zip file and move it into the desired folder.
   Take the following precautions when installing PCT002Z-E.
   • Exit running application programs.
   • When updating latest PCT002Z-E, uninstall the old version of PCT002Z-E. (The version of PCT002Z-E is shown in the Opening window (section 2.3).)

*9 How to uninstall PCT002Z-E
   To uninstall PCT002Z-E, just remove the folder containing PCT002Z-E from the computer.

☆ The specifications of this software is subject to change without notice.
☆ Toshiba Schneider Inverter assumes no responsibility for damage caused directly or indirectly by the use or a malfunction of this software product.
☆ These system requirements are minimum conditions required for the use of PCT002Z-E. They do not guarantee that all functions of PCT002Z-E are performed normally.
☆ Windows® is listed as the abbreviation for a Microsoft® Windows® operating system.
   Microsoft® Windows® and Microsoft® Excel® are registered trademarks or trademarks of the US Microsoft Corporation in the USA and other countries.
☆ PC-98 series is a trademark or registered trademark of NEC Corporation.
☆ The symbols used in this manual have the following meanings.
   [ ]: Buttons or radio buttons in windows of PCT002Z-E or Microsoft Windows
   ' ': Menus items of PCT002Z-E
2. How to use PCT002Z-E

2.1. Enabling macros
When PCT002Z-E is started for the first time, the dialog box (shown in Fig. 2 or 3) may appear. If it appears, click the [Enable Macros] or [Enable Content], because PCT002Z-E uses macros.

![Fig. 2 Security warning 1](image1)

![Fig. 3 Security warning 2](image2)
2.2. License agreement
When PCT002Z-E is started for the first time or after macros have been enabled, the PCT002Z-E license agreement window (Fig. 4) appears. Read the contents carefully and click [I Agree] if you wish to use PCT002Z-E. Clicking [I Do Not Agree] closes the Excel book.

![License agreement](image)

Fig. 4 License agreement

2.3. Opening window
When macros are executed, the Opening sheet (Fig. 5) appears. After reading the instruction manual (this manual) carefully, click [To setting >] in the top-right of the window and make necessary settings.

![Opening window](image)

Fig. 5 Opening window

① [To setting >]

The Setting sheet is shown by clicking this button.
2.4. Setting sheet

The Setting sheet (Fig. 6) allows you to make settings necessary for communications between the inverter and the computer and to export and import related parameters.

2. Communication setting

- **Communication setting**: Specify the COM port number of the computer.
- **Baud rate**: Specify the baud rate (F800) of the inverter.
- **Parity**: Specify the parity (F801) of the inverter.
- **Inverter number**: Specify the number (F802) assigned to the inverter.

Communicate by disregarding the inverter number when setting the Inverter number of PCT002Z-E to "none".

---

*1 If you select a parameter other than parameters set for the inverter or the computer connected to it, an error may occur during communication.
Table 1  Table of settings for communications with inverter*2

<table>
<thead>
<tr>
<th>Title</th>
<th>Content</th>
<th>Adjustment range</th>
<th>Default setting</th>
</tr>
</thead>
<tbody>
<tr>
<td>F800</td>
<td>Baud rate</td>
<td>3:9600bps 4:19200bps 5:38400bps</td>
<td>4</td>
</tr>
<tr>
<td>F801</td>
<td>Parity</td>
<td>0:Non parity 1:Even parity 2:Odd parity</td>
<td>1</td>
</tr>
<tr>
<td>F802</td>
<td>Inverter number</td>
<td>0~99*3</td>
<td>0</td>
</tr>
</tbody>
</table>

*2 The communication error might occur according to the setting of a communication function parameter (F803-F808 and F829, etc.) other than the above. For details, refer to “TOSVERT VF-S15 Detailed manual : E6581611”.

*3 Since PCT002Z-E uses the Toshiba inverter protocol ASCII mode, only a number between 0 and 99 can be assigned to an inverter.

③ Parameter concerning trace function*4

<tr>
<td>Inverter operating time</td>
</tr>
</tbody>
</table>

Fig. 9  Inverter individual information

'Inverter type-form': Displays the type of the inverter.
'Serial number': Displays the serial number of the inverter.
'CPU1 Ver': Displays the version of the inverter's CPU1.
'CPU2 Ver': Displays the version of the inverter's CPU2.
'Inverter operating time': Displays the operating time of the inverter.

5. [Parameter export]

The values set for the trace-related parameters (Fig. 8) is exported into the inverter by clicking this button. After that, the values set for the trace-related parameters (Fig. 8) and information on the inverter (Fig. 9) are imported.

6. [Parameter import]

The values set for the trace-related parameters (Fig. 8) and information on the inverter (Fig. 9) are imported by clicking this button.

7. [To graph >]

The Graphic sheet is shown by clicking this button.
2.5. Graphic sheet

The Graphic sheet (Fig. 10) allows you to read trace data and display it in graphic form.

8. [Trace data reading]

The trace data stored in the inverter is read and displayed in graphic form by clicking this button.

When 1 or 3 is set to F740 and read the data until occur the trip, please execute reading in the state of the trip to read data correctly. Alternatively, if you record the trace data with the trigger, please read the trace data before resetting the power supply.

9. [Trace trigger]

When setting value of F740 is 1 or 3, The trace data until that time stored in the inverter is read and displayed in graphic form by clicking this button. At that time, the trace selection on the inverter side is disabled temporarily, so if communications are interrupted halfway, the trace selection will be set to "disabled". In that case, please set the former value once again.

10. 'Graph'

Displays acquired data in graphic form.

11. 'Max' 'Min'

Display the maximum and minimum values of 4 kinds of data acquired.
⑫ 'Cause for trip'
   Display the cause of tripping of the inverter.
⑬ [< To setting]
   The Setting sheet is shown by clicking this button.
⑭ [To data >]
   The Data sheet is shown by clicking this button.
⑮ [To trip >>]
   The Trip history sheet is shown by clicking this button.
2.6. Data sheet

The data sheet (Fig. 12) lists 4 kinds of acquired numerical data (data 1 through 4) in groups of 100 each.

![Data sheet](image)

[Trace data save]

Click this button to name and save the file automatically. The file name consists of date and time when data is saved. The file name can be changed when saving the file.

An example of a file name assigned automatically is shown in the table below.

<table>
<thead>
<tr>
<th>Example of file name</th>
</tr>
</thead>
<tbody>
<tr>
<td>Current date and time</td>
</tr>
<tr>
<td>Name assigned to the file</td>
</tr>
</tbody>
</table>
① 'Time(s)'
Displays the time at the same intervals as the trace cycle.

② “4 kinds of data acquired”
Displays 4 kinds of data acquired in groups of 100 each.

③ [< To graph]
The Graphic sheet is shown by clicking this button.

④ [<< To setting]
The Setting sheet is shown by clicking this button.
2.7. Trip history sheet

The trip sheet (Fig. 13) lists acquired details on a past trip of trips 1 to 4.

Fig. 13  Trip sheet

2. "Past trip detailed history"
   Displays acquired details on a past trip of trips 1 to 8.

2. [Reload]
   The detailed history is read from drive by clicking this button. And then, a detailed history will be updated on the sheet.

2. [<<To graph]
   The Graph sheet is shown by clicking this button.

2. [HELP]
   The Inverter Status help is shown by clicking this button.
3. Troubleshooting
This section explains problems that may occur when PCT002Z-E is used.

Q1 : Although the [Trace data reading] button is clicked, time-out occurs.
A1 : Communication between the inverter and the computer is not established. Check whether the cable is connected properly and all settings for communications are made correctly.

Q2 : Although trace data is acquired, no data is displayed or other data is displayed.
A2 : Check whether “Deselect” is selected for ‘Trace selection’.

Q3 : Trace data acquired is discontinuous.
A3 : This phenomenon occurs if the inverter is tripped or triggered and the recording of trace data is interrupted before 100 pieces of trace data are collected, and therefore the previous data remains. This phenomenon may occur if the inverter is tripped or triggered immediately after Power supply turning on.

Q4 : The trace tool software has started, but it does not respond to the click of any button.
A4 : This phenomenon occurs if the Excel’s macro security is set at ‘High’ level. To solve this problem, set the macro security at ‘Medium’ or lower level.

Q5 : The instruction manual for VF-MB1 states that any number of up to 248 can be assigned to an inverter (F802), but only a number of up to 99 can be assigned with PCT002Z-E.
A5 : Since PCT002Z uses the Toshiba inverter protocol ASCII mode, only a number between 0 and 99 can be assigned to an inverter.

Q6 : The communication error is occurred when use PCT002Z and PCM001Z.
A6 : Because PCM001Z occupies the communication port, PCM001Z and PCT002Z can not be used at the same time. Please use PCT002Z after PCM001Z ended. Or please use a port different for PCM001Z.
